Revision History	Description	Effective Date
BII1030 Series Preamplifier Datasheet REV. A	New Gain Scaling Factor. New Maximum Ratings of Vc.	Effective for devices shipped after Feb. 12, 2024.
BII1030 Series Preamplifier Datasheet	Original Datasheet.	Effective for devices shipped before Feb. 12, 2024.

BII1030 Series Preamplifier Datasheet REV. A

Variable Gain Amplifier (VGA): 60 to 70 dB Range

BII1030 series are variable gain amplifiers (VGA) whose gains are set by positive voltages to amplify the weak signals from hydrophones, receiving arrays, and ultrasound transducers. It can also be used as TVG (Time Varying Gain) amplifiers in active SONAR and ultrasound system to compensate the transmission (propagation) loss such as $-40\log R-2\alpha R$ (R: Spherical Spreading Distance, α : Attenuation Coefficient) when working with voltage ramp gain control signals. This VGA amplifier also help to reduce dynamic range of A/D converters.

Typical Applications		
Programmable Hydrophone, Ultrasound, NDT, AE	TVG (Time Varying Gain) Amplifier, Range Compensation	
Echo Sounding System: Image, Fishery, and Plankton Sonar	Communication, Array Amplitude Shading	

Specifications

pecifications VGA Amplifier	BII1031	BII1035		
Input Type:	Differential or single ended	Single Ended		
•	e _n : 10 nV/vHz, i _n : 0.8 fA/vHz	e _n : 1.8 nV/vHz, i _n : 2.7 pA/vHz		
Input Referred Noise:	Roughly, electronic noise density at input, RTI, $V_n^2 = e_n^2 + [i_n * impedance of the transducer (or hydrophone)]^2$. White noise level is proportional to the square root of bandwidth. Narrow bandwidth should be customized to reduce the white noi level at output with which the weak signals may be inundated.			
(f ≥ 1 kHz)				
	20 MΩ 11pF. Refer to R _i C _h Filter.	50 Ω		
Input Impedance:	$R_150\Omega$ of BII1035 matches the 50Ω coax cable impedance and damps down NDT transducer to achieve good transient			
	response or reduce decaying time (or ringing) of the transducer.			
Maximum Input:	1.2 Vpp or V _{omax} /Gain, whichever is less.	2.5 Vpp or V _{omax} /Gain, whichever is less.		
	High Pass Filter:	High Pass Filter:		
	30 Hz, 1 kHz, or 10 kHz. Customized.	10 kHz.		
	Filters of Preamps. Both oceanic ambient noises an	d the self-noises of electronic devices decrease when frequency increases.		
	It is recommended to choose a built-in high pass filt	er to reject noises in low frequency range. For example, if you are interested in		
	the signals greater than 1 kHz, you may specify a high	gh pass filter of a preamp with -3dB cut-off frequency 100 Hz to improve signal		
Built-in Filter:	to noise ratio of the signals of the interest.			
Buiit-iii riiter.	System Filters Consisting of Standalone Piezoelectric Hydrophones and Standalone Preamps.			
	System Filters Consisting of Standarone Piezoelecti	ic Hydrophones and Standaione Preamps.

Accessories:

Part Number: DCBP24.

To Terminals of DC Supply:

- a. One Red 4mm Banana Plug.
- b. One Black 4mm Banana Plug.

DC Power Plug.

To DC Power Jack of the Device.

Red Banana Plug or Red Wire Lead: +VDC.

Black Banana Plug or Black Wire Lead: Common.

Cable Shield, if any: Shielding.

One 1m DC supply cable. One end is with Red and Black Banana Plugs, another end of the cable is with DC Power Plug. Depending on output terminals of buyer's DC Supply, buyer may assemble other type of connectors to DC supply cable at buyer's cost.

Part Number: DCBS18V.

Two 9V Battery Snaps + 0.3m (12") Cable + DC Power Plug

One 0.3m (12") DC supply cable. One end is two 9V Battery Snaps which supplies +18VDC to amplifiers, another end of the cable is with DC Power Plug.

Questions

What if the connector of my transducer/sensor is SMA or SMC Connector? SMA (or SMC) to BNC (Male) adaptors are available from many electronic distributors. BII may sell the adaptor as an accessory of the device upon request. By default, BII does NOT supply the adaptor as accessories.

How do I wire 50Ω transducer/sensor to preamplifiers in high frequency applications? Many BII preamplifiers have non-50Ω input resistances which does NOT match 50Ω in high frequency applications. Therefore, one T type BNC adaptor and one 50Ω BNC terminal are necessary between 50Ω transducer/sensor and the preamplifier to change the impedance of the preamp to be 50Ω . BII may ship T type BNC adaptor and one 50Ω BNC terminal as accessories of the device. Please specify this request when ordering. By default, BII does NOT supply these two parts as accessories. By the way it is NOT necessary to do 50Ω matching in low frequency range applications in which electromagnetic wave lengths are much greater than the cable length.

My acoustic sensors generate differential signals in MHz range, are TRS connectors of BII preamps suitable for my applications? Our test shows the TRS connectors (Plug and Jack) of BII preamps can be used up to 20 MHz. Test Conditions: TRS Jack with 0.2m cable and TRS plug with 1m cable. Oscilloscope: 1MΩ | 30pF, Signal Source: DDS Signal Generator.

Can 3.5mm (1/8") TRS be configured for single-ended signal of a hydrophone/transducer which does not have built-in preamplifier? Yes, BII1031 preamp with differential-input TRS can accept single-ended signals from hydrophones/transducers whose TRS wiring should be like followings: TRS Tip: Signal. TRS Ring and Sleeve: Both terminals are soldered together for Signal Common and Shielding. Common and shielding should be "one-point" contact.

Can BII explain why the capacitance of my hydrophone/transducer affect high pass filtering? (1). Hydrophone/transducer is high impedance devices in low frequency range. Its simplified complex impedance = $j/(2\pi f C_h)$, C_h is the capacitance of hydrophone/transducer, f is frequency in Hz. This impedance is in series with preamp R_i and can reach several $M\Omega$ to hundreds $M\Omega$ depending on C_h and f. (2). Most high-performance operational amplifiers (IC chips) can use input resistors R_i up to 1 to 200 $M\Omega$ to avoid bumping into saturation issue.

Variable Gain Preamplifiers BII1030 Series with Metal Housing LxWxH = 95x59x35, Outline Dimensions (mm)

BII's Single-Ended Output to Single-Ended Input of a DAQ

BII's Single-Ended Output to Differential Input of a DAQ

If input impedance of a DAQ device is greater than 100M Ω , use following wiring with one 100k Ω to 1M Ω resistor.
