<b>Sensitivity Matching: (at 1 kHz)</b>	When hydrophones are used as array elements, it is necessary for array elements to possess uniform sensitivities. Available Options of Sensitivity Tolerance: a. $\pm 2.0$ (Default); b. $\pm 1.0$ ; c. $\pm 0.5$ ; d. $\pm 0.3$ ; e. $\pm 0.1$ ; in dB V/ $\mu$ Pa. 1. Sensitivity is tested at 1 kHz in water. 2. Hydrophones whose sensitivity variations are out of specified tolerance are rejected.	
<b>FFVS:</b>	Refer to Graph of <a href="#">FFVS vs. Frequency</a> . Free-field Voltage Sensitivity.	
<b>Pressure Noise Density:</b>	Refer to Graph of <a href="#">Pressure Noise Density</a> , Referred to Input (RTI), in $\mu$ Pa/ $\sqrt{\text{Hz}}$ . Graphs of Pressure Noise Density are for hydrophones with default preamps. Contact BII for noises of bespoke preamps.

	in Air: 3 Hz ~ 9 kHz	in Air: 3 Hz ~ 9 kHz
	1. Reduce Noise. Both ocean ambient noises and the self-noises of electronic devices decrease when frequency increases. It is recommended to choose a built-in high pass filter to reject noises in low frequency range. For example, if you are interested in the signals greater than 1 kHz, you may specify a high pass filter with -3dB cut-off frequency at 100 Hz to improve signal to noise ratio of the signals of the interest. 2. Avoid Saturation. When there are strong low frequency noises, disturbances, and/or vibrations, resulting from rough surface waves and/or mechanical movements of the platform, it is recommended to specify a high pass filter to avoid hydrophone saturation in these low frequency ranges.	
<b>Preamp Gain (dB):</b>	32 dB.	10 and 40 dB.

#### Question:

What if the mating connector of my DAQ module or recording device is NOT available from BII? A bespoke connector adaptor might be assembled by BII and BII ships the adaptor to buyer as accessory of the device. Please contact BII for customizations. Many adaptors for standard connectors are available in worldwide electronic suppliers such as BNC to SMA, BNC to SMC, XLR to TRS, etc. Check out your local suppliers.

Is impedance matching necessary between hydrophones/sensors and preamplifiers/Recorders/Analyzers? it is NOT necessary to do impedance matching in low frequency range applications in which electromagnetic wave lengths are much greater than the cable length. High frequency transducers such as NDT pulsing transducers need 50 $\Omega$  impedance matching among transducers, cables, and analyzers/digitizers.

My acoustic sensors generate differential signals in MHz range, are TRS connectors suitable for my applications? BII's test shows TRS connectors (Plug and Jack) of BII preamps can be used up to 20 MHz. Test Conditions: TRS Jack with 3m cable and TRS plug with 1m cable. Oscilloscope: 1M $\Omega$  || 20pF, Signal Source: DDS Signal Generator.

Can 3.5mm (1/8") TRS be configured for single-ended signal of a hydrophone/transducer which does not have built-in preamplifier? Yes, the preamp with differential-input TRS can accept single-ended signals from hydrophones/transducers whose TRS wiring should be like followings: TRS Tip: Signal. TRS Ring and Sleeve: Both terminals are soldered together for Signal Common and Shielding. Common and shielding should be "one-point" contact.

Can BII explain why the capacitance of my hydrophone/transducer affect high pass filtering? (1). Hydrophone/transducer is high impedance devices in low frequency range. Its simplified complex impedance =  $j/(2\pi f C_h)$ ,  $C_h$  is the capacitance of hydrophone/transducer,  $f$  is frequency in Hz. This impedance is in series with preamp  $R_i$  and can reach several M $\Omega$  to hundreds M $\Omega$  depending on  $C_h$  and  $f$ . (2). Most high-performance operational amplifiers (IC chips) can use input resistors  $R_i$  up to 1 to 200 M $\Omega$  to avoid bumping into saturation issue.

Can the hydrophone with differential outputs be wired to single-ended inputs of a DAQ device (Data Acquisition Equipment) such as an Oscilloscope?

Yes, output+ and Common of a BII hydrophone can be used a single-ended signal, or Output- and Common of the hydrophone can be used a single-ended signal.

(1) The terminal of unused output MUST be insulated to avoid short circuit.

(2) Neither output+ nor output - of the hydrophone can be wired to common which is going to destroy the hydrophone by short circuit.

How do I use a programmable sensitivity hydrophone as a fixed sensitivity hydrophone?

When a Gain Selection wire is short to Digital Common, its digital logic is Low or "0". The gain of the built-in preamp is set to low gain such as 10dB. When a Gain Selection wire is floating or open, its digital logic is High or "1". The gain of the built-in preamp is set to high gain such as 50dB. **The unused terminals and bare splice wire leads MUST be insulated to avoid short circuit.**

**What if the connector of my analyzer (instrument) is SMA or SMC Connector?** Buyer may order a SMA (or SMC) to BNC (Male) adaptor from local electronic distributors in buyer's country. BII may ship the adaptor as accessory of the device if buyer requests when ordering. By default, BII does NOT supply the adaptor as accessories.

**How to increase hydrophone sensitivity for extremely weak sounds?**

BII low noise hydrophone with built-in preamp (Differential Output) -> Long Cable -> Standalone Preamp -> Analyzing Instrument or Recorder.

**What components are necessary to compensate the propagation and spreading loss?**

A low noise hydrophone + [PGA](#) amplifier with gain of 0/20/40/60 dB.

A low noise hydrophone + [VGA](#) amplifier with gain of 0 ~ 70 dB.

A low noise hydrophone + [AGC](#) amplifier with gain of -20 ~ 80dB.

**How do I use Gain Selection wires of a Programmable Sensitivity Hydrophone in field?**

(1). Manual Gain Selection.

When a Gain Selection wire is floating or open, its digital logic is High or "1". When a Gain Selection wire is short to Digital Common, its digital logic is Low or "0". Sensitivity of a Hydrophone is fixed when its Gain Selection wires are fixed to Digital Common or open (floating) during operation.

(2). Gain Selection with Digital Outputs. Digital Outputs of a DAQ (data acquisition device) select gains with TTL/CMOS logic levels.
